

# RETAIL SECURITY

making  
connections

# the security of constant connection

It's your job to ensure that your store premises, property, and people are constantly protected. But without a reliable, always-on link between your alarm panel and monitoring service, your system can't really do the job.

## BETTER COMMUNICATION MEANS MORE PROTECTION

Most security systems rely on “dial-up” connections — traditional phone lines — as the communication link to your monitoring service. But where you have the ability to add communication links, the DMP XT Series™ Panel lets you include Internet and cellular connections, either in addition to or instead of dial-up.

Working with your DMP authorized dealer, you can select the optimum communications strategy for your stores and your business. Whether downed wires or you need to protect against the possibility of wires being intentionally cut, the XT Series Panel enables you to stay constantly connected and continuously protected.

Some features are not available with all systems. Some features are optional.  
Please discuss this and other options with your local authorized dealer.

## THE WIRELESS ADVANTAGE

In addition to multiple communication options, the XT Series Panel also includes built-in premises wireless capability. With wireless sensors — motion detectors, door and window switches, and other speciality devices — you avoid unsightly holes in the walls, floors, and ceiling. With no limitations for wire placement, these devices can be installed more quickly and positioned for maximum protection.

Wireless systems offer added convenience and simplicity for your employees. You can issue proximity access cards and wireless key fobs to simplify arming and disarming your system.

## CONNECT WITH DMP MYACCESS™ MESSAGING FEATURES.

You and your store managers can receive email or text message alerts from your alarm system notifying you of system events including Arm/Disarm and all alarms utilizing either your network or cellular communication.

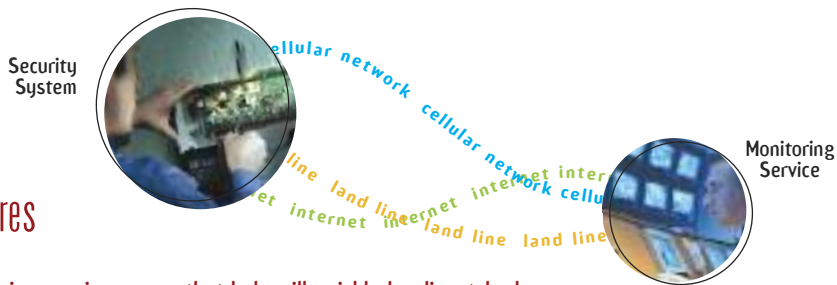

With our cellular connectivity, you and your store personnel can remotely control the alarm system via SMS text commands

**By monitoring your alarm system, email or text messages with status information can be received, and simple text commands can control the system via cell phone.**

## monitoring adds both security and features

Relying on a security monitoring service means that help will quickly be dispatched when your alarm system detects a problem. That's a critical benefit. But relying on a monitoring service also lets you take advantage of the MyAccess messaging features... the ability to remotely control your system from your cell phone, and to receive text or email message alerts from your system.

from a cell phone. Users can arm or disarm their system, and perform other functions. Each command received by the panel is acknowledged back to the user via return SMS Message.

### FEATURES DESIGNED FOR RETAIL

The Late to Open/Early to Close feature alerts you when your facility isn't opened or closed on schedule. The Traffic Count feature provides a report that gives you valuable information about the volume of traffic entering your facility. DMP technology not only helps protect your business, it also

provides information that helps you to better manage your business.

### PROTECTION FOR YOUR EMPLOYEES AS WELL AS YOUR INVENTORY

DMP Remote Link™ software also enables you and your store managers to remotely monitor employee arrivals and departures, and to track their movement in your stores.

Knowing where and when your employees are moving around your facilities can be a powerful shrinkage reduction tool.

## MORE FEATURES EQUALS STRONGER SECURITY

- ▶ Selectively protect specific areas of your business and reduce shrinkage. Turn the system off for the sales area while continuing to protect the stock room or office. Or activate the perimeter alarms while internal alarms are disarmed, allowing employees to move freely within your business yet maintain protection from intruders.
- ▶ Automatically receive email or text messages notifying you and your store manager that your system has been turned on or off, an alarm has occurred, or employees have entered a protected area.
- ▶ Keypad shortcut keys provide one-button access to the most commonly used functions, speeding and simplifying operation for you and your employees.
- ▶ The Cancel/Verify™ feature lets you instantly cancel a false alarm to avoid an unnecessary response, or, more importantly verify an alarm to quickly summon help.
- ▶ The Armed Silence™ feature allows store systems to remain armed (on) after an alarm is silenced, unlike other systems that require you to disarm (disable) your system to turn the sirens off, leaving the store unprotected.
